Nuclear Engineering and Design 150 (1994) 497–499

Nuclear Engineering and Design

Contents of Volume 150

CONTENTS OF ISSUE 150(1)

Analysis of SONACO axial cooling experiments, *B. Sigg, T.V. Dury and M. Hudina* 1

An approach to the analysis of common cause failure data for plant-specific application, *A. Mosleh, G.W. Parry and A.F. Zikria* 25

Analytical solution of two-dimensional diffusion in a composite medium with application to cooling of reactor fuel elements, *S. Olek, E. Wacholder and E. Elias* 49

Calculating decay heat removal rates via natural circulation along variable heat flux reactor fuel plates, *M.A. Langerman* 61

Fuel temperature analysis method for channel-blockage accident in HTTR, *S. Maruyama, N. Fujimoto, Y. Sudo, Y. Kiso and H. Hayakawa* 69

Investigation of turbulence modelling in thermal stratification analysis, *T. Muramatsu and H. Ninokata* 81

Void-fraction distribution under high-pressure boil-off conditions in rod bundle geometry, *H. Kumamaru, M. Kondo, H. Murata and Y. Kukita* 95

Inelastic stress–strain response of $2\frac{1}{4}$Cr–1Mo steel under combined tension–torsion at 600 °C, *T. Inoue, F. Yoshida, Y. Niitsu, N. Ohno, T. Uno and A. Suzuki* 107

Fatigue–creep life prediction of $2\frac{1}{4}$Cr–1Mo steel under combined tension–torsion at 600 °C, *T. Inoue, S. Kishi, H. Koto and Y. Takahashi* 119

Inelastic stress–strain response for notched specimen of $2\frac{1}{4}$Cr–1Mo steel at 600 °C, *T. Inoue, S. Imatani, Y. Fukuda, K. Fujiyama, K. Aoto and K. Tamura* 129

Fatigue–creep life prediction for a notched specimen of $2\frac{1}{4}$Cr–1Mo steel at 600 °C, *T. Inoue, M. Sakane, Y. Fukuda, T. Igari, M. Miyahara and M. Okazaki* 141

Classification and prediction of the critical heat flux using fuzzy theory and artificial neural networks, *S.K. Moon and S.H. Chang* 151

Experimental observations on flow characteristics in an open two-phase natural circulation loop, *I.S. Kyung and S.Y. Lee* 163

14 MeV neutron distribution in a shield with a hollow channel, *S.I. Belousov, S.Y. Antonov and K.D. Ilieva* 177

Increasing the power of the high temperature reactor module, *A.I. van Heek* 183

Letter to the Editor 191

Book Reviews 193

Instructions to Contributors 195

CONTENTS OF ISSUES 150(2–3)

Preface, *The Editors* ix

Coupling of smooth particle hydrodynamics with the finite element method, *S.W. Attaway, M.W. Heinstein and J.W. Swegle* 199
Explicit calculations of highly non-linear contact-impact problems, *I. Huněk* 207
Viscoplastic augmentation of the smooth cap model, *L.E. Schwer* 215
Automatic contact algorithm in DYNA3D for crashworthiness and impact problems, *R.G. Whirley and B.E. Engelmann* 225
Numerical simulation of impact and fast transient phenomena using AUTODYN™-2D and 3D, *N. Robertson, C. Hayhurst and G. Fairlie* 235
Benchmark study of two- and three-dimensional, finite element calculations, simulating dynamic pulse buckling tests of cylindrical shells under axial impact, *E.L. Hoffman and D.J. Ammerman* 243
Contact-impact algorithms on parallel computers, *Z.H. Zhong and L. Nilsson* 253
Linking of Lagrangian particle methods to standard finite element methods for high velocity impact computations, *G.R. Johnson* 265
One-dimensional propagation speed of an elastic–plastic–viscoplastic stress wave, *N. Tanimoto* 275
Vibrational conductivity approach to high-frequency dynamics, *A.K. Belyaev* 281
Analytical, numerical and experimental investigations on the impact behaviour of selected structures, *T. Quercetti, G. Wieser, H. Völzke and P. Zeisler* 287
Integrated impact failure analysis of concrete slab structures with consideration of impact load characteristics, *M.W. King and A. Miyamoto* 295
Impact absorption energy of steel pipe beam, *N. Ishikawa and T. Hoshikawa* 303
Effect of high explosive detonations on concrete structures, *D. Kraus, J. Roetzer and K. Thoma* 309
Behaviour of materials subjected to an impact force and new evaluation method for impact strength, *I. Maekawa* 315
Evaluation of impact and brittleness of structural ceramics, *Y. Bao and Z. Jin* 323
Verification by calculations of shock-like loads on transport and storage casks, *R. Diersch, R. Hüggenberg, G. Dreier and H. Geiser* 329
Investigation of the impact behaviour of wooden impact limiters, *R. Diersch, M. Weiss and G. Dreier* 341
Structural analysis of the basket for a CASTOR transport cask, *R. Diersch, G. Milde and J.W. Jones* 349
A fracture mechanics safety concept to assess the impact behavior of ductile cast iron containers for shipping and storage of radioactive materials, *H. Völzke, R. Rödel and B. Droste* 357
Application of the distinct element method to the analysis of the concrete members under impact, *H. Masuya, Y. Kajikawa and Y. Nakata* 367
Example for the application of IAES–TECDOC criteria for the brittle fracture safe design of a ductile iron shipping package, *D. Bounin, R. Hüggenberg and H. Geiser* 379
Experimental and numerical research on ship collision and grounding of oil tankers, *H. Ohtsubo, Y. Kawamoto and T. Kuroiwa* 385
Calculation of the collision resistance of ships and its assessment for classification purposes, *M. Böckenhauer and E.D. Egge* 397

Impact research for containment design, *J. Eibl and G. Kobler* 409
Computer modelling of wood-filled impact limiters, *N. Butler* 417
BERN railway station: security assessment under a speed increase of trains from 30 to 40 km h^{-1}, *C. Ribaux and M. Capron* 425
The numerical simulation of the impact phenomena in nail penetration, *P.A. Bartelt, W. Ammann and E. Anderheggen* 431
Numerical simulation of a high velocity impact on fiber reinforced materials, *K. Thoma and D. Vinckier* 441
Behaviour of a spent fuel transport–storage cask during an airplane crash, *P. Malesys* 453
Design and testing of a shock absorber for a type I container, *M. Sappock, B. Beine, D. Rittscher and M. Jais* 459
Elastodynamics of vehicles and crash simulation, *F. Böhm* 465
Crash tests for passenger cars and their relationship to the actual accident occurrence, *H. Appel, G. Lutter and T. Sigmund* 473
Numerical studies of impact on reinforced concrete beam of hard missile, *K. Shirai, C. Ito and H. Onuma* 483
Static and shock-tension loaded headed studs in reinforced concrete, *U.G. Herzbruch* 491
